AI for Bharat Hackathon

Powered by aws

Team Name : **VaaniBiz**

Team Leader Name : **Kriti**

Problem Statement : **Design an AI-driven solution that helps create, manage, personalize, or distribute digital content more effectively.**

Brief about the Idea:

The proposed solution is a GenAI-powered, voice-first platform that helps aspiring and first-time entrepreneurs convert a simple business idea into a personalized, actionable business plan with realistic analytics and growth guidance. Users can describe their idea in natural language, and the platform generates context-aware insights such as expected sales, costs, break-even timelines, and startup roadmaps based on their location and resources. It also features a local opportunity and events discovery system that highlights relevant schemes, workshops, and market events. Designed for inclusivity, the platform supports local languages, low-bandwidth access, and non-technical users, making business planning simpler and more accessible.

How is it different from existing ideas?

- Converts spoken business ideas directly into actionable plans (not templates or static advice).
- Provides localized, realistic analytics instead of generic market insights.
- Combines planning + analytics + opportunity discovery in one platform.
- Designed for voice-first, low-literacy, and low-bandwidth users.

How will it solve the problem?

- Reduces confusion by giving a clear feasibility check for business ideas.
- Helps users understand expected sales, costs, and growth paths before investing.
- Guides users with step-by-step startup roadmaps.
- Proactively surfaces relevant local events, schemes, and opportunities.

USP of the proposed solution

- Idea-to-Action in one conversation using GenAI.
- Analytics without complexity—no dashboards or technical knowledge required.
- Location-aware opportunity intelligence tailored to each user.
- Inclusive, voice-first design for first-time and non-technical entrepreneurs.

Features offered by our Solution

One business idea - multiple ready-to-use content outputs

Business Content Generator

Turns raw ideas into structured business content

Event Pitch Content

Auto-generated pitch for fairs and events

Readable Business Plans

Gives simple, easy to understand business plans

User's Business Idea (Voice/Text)

Voice first, local language

Takes input and responds in local language and creates content

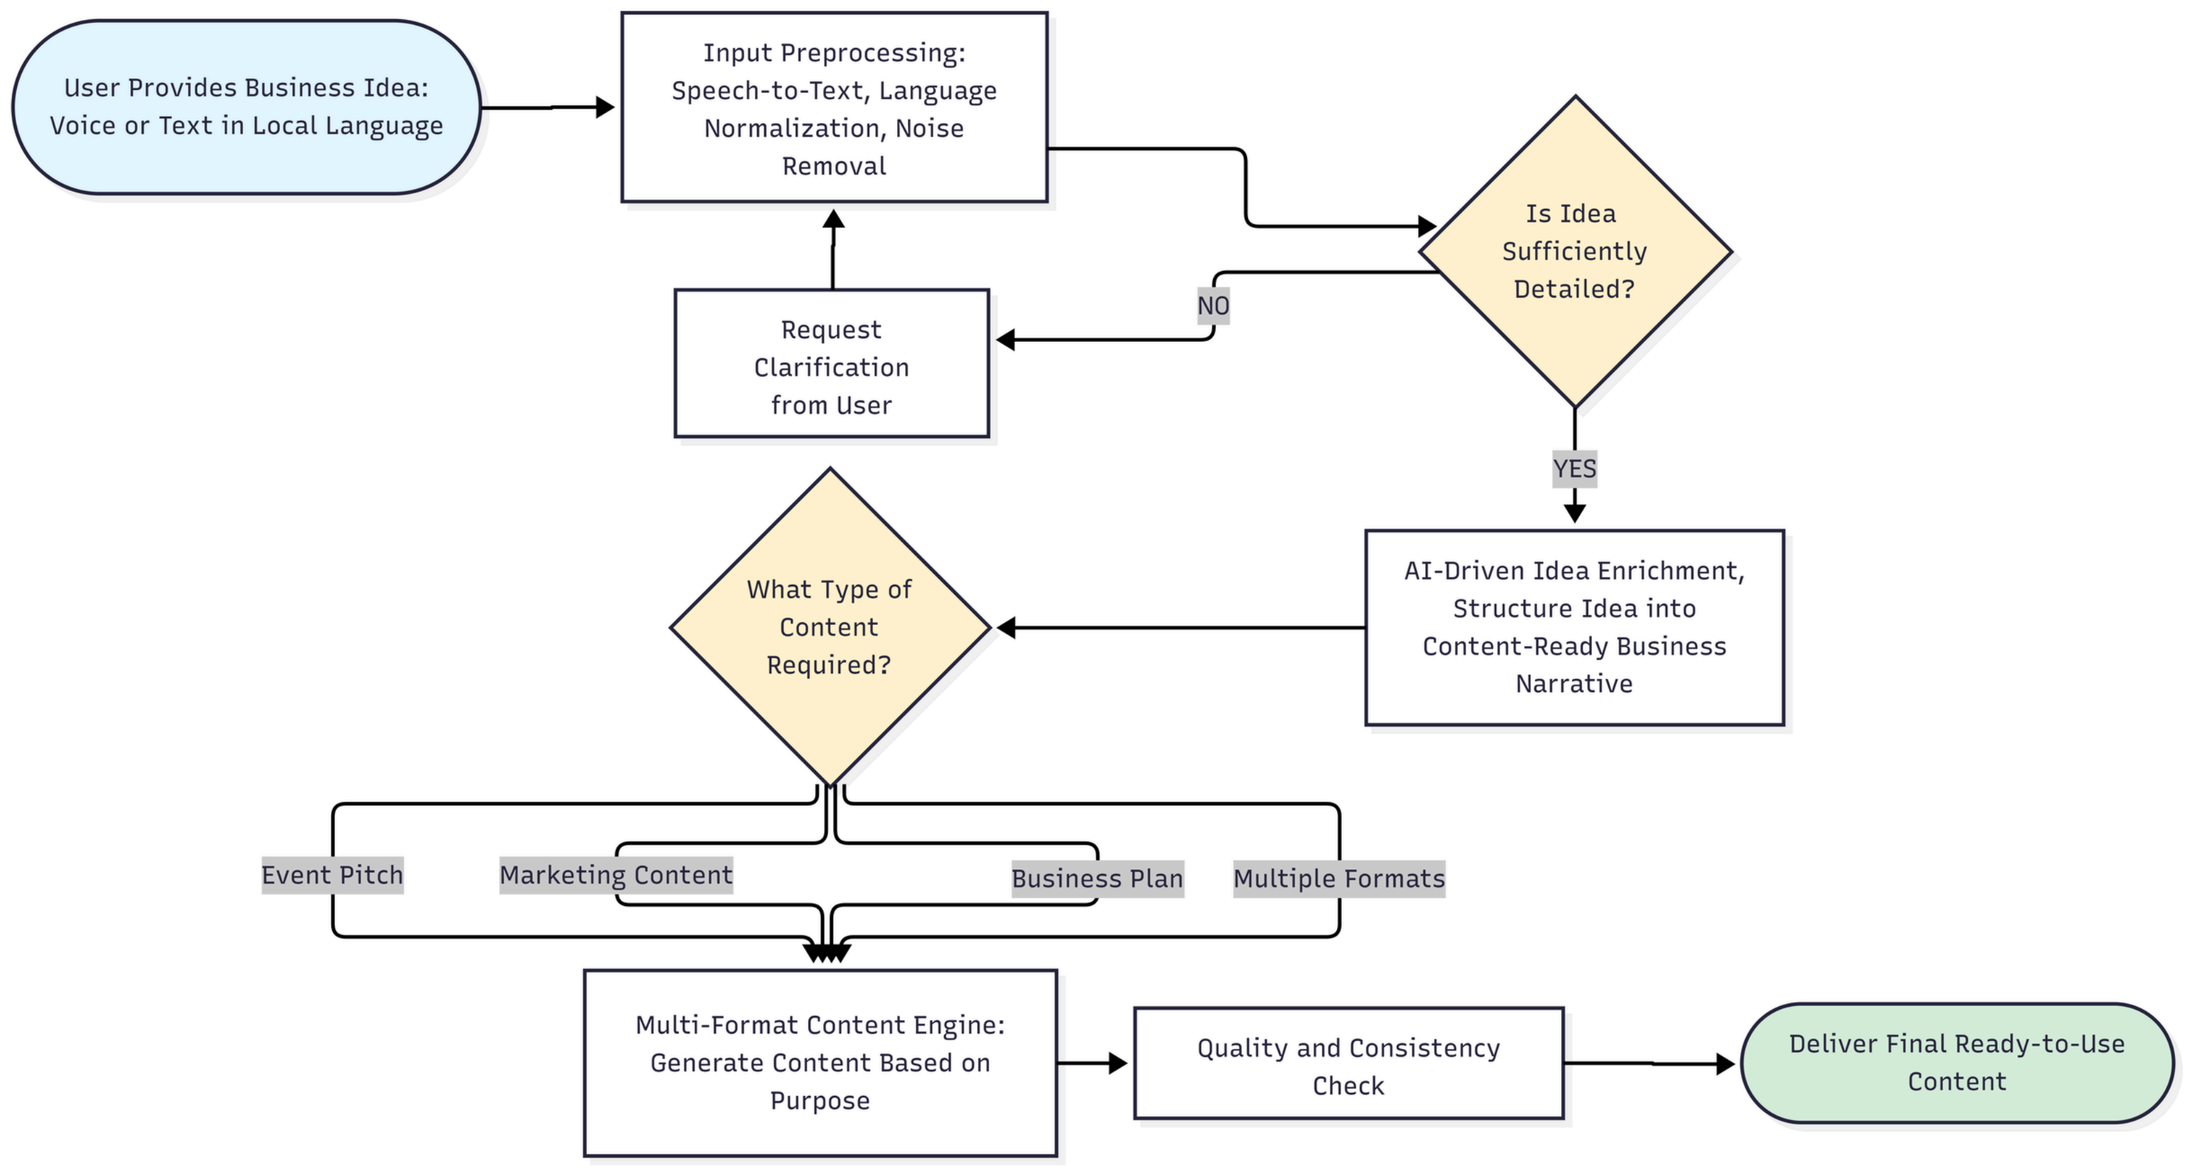
Sales & Marketing Content

Whatsapp, social posts & promo messages

Multi Format Content Engine

One spoken idea- posts, pitches and promos

Process Flow Diagram



Wireframes/Mock diagrams of the proposed solution (optional)

Architecture diagram of the proposed solution:

1. User Interface - Mobile/web app with offline, low-bandwidth support

2. Accessibility Input - Voice & text input with local language detection

3. GenAI Decision & Explanation Engine -Understands ideas and suggests next actions

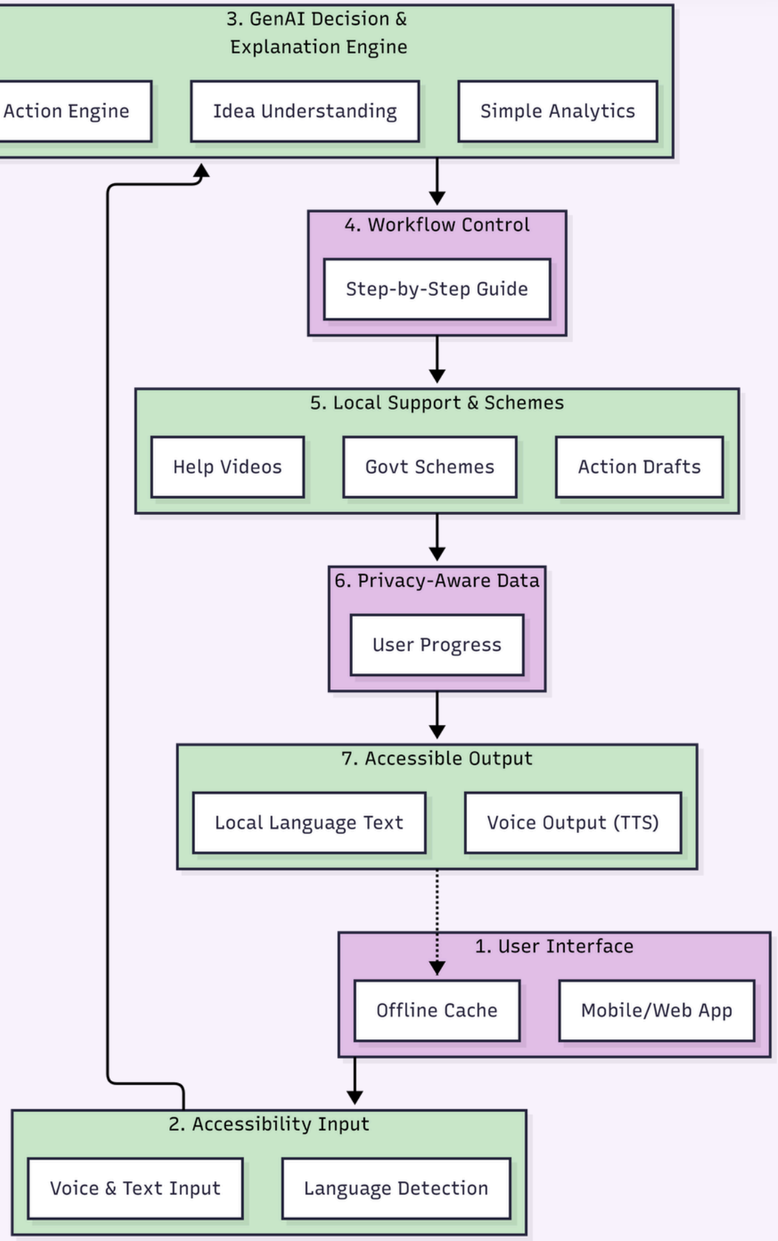
4. Workflow Control - Guides users step-by-step

5. Local Support & Schemes - Schemes, events, and participation help

6. Privacy-Aware Data - Minimal, privacy-first data storage

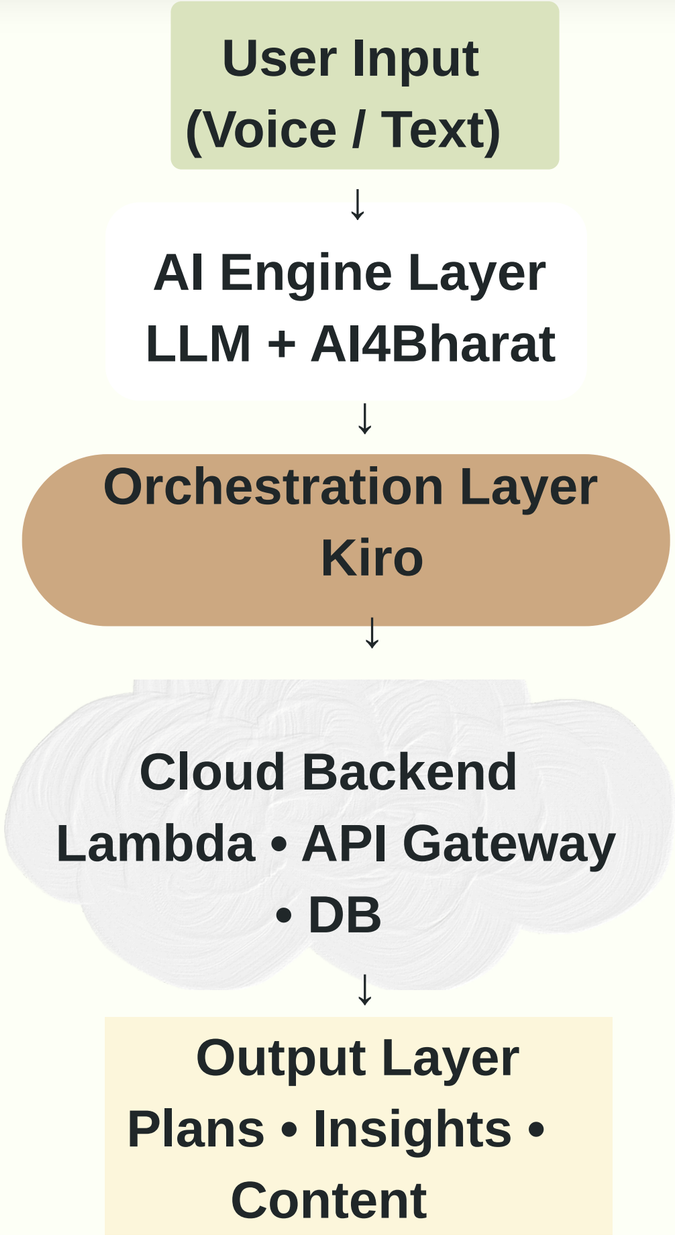
7. Accessible Output - Local language text and voice output

Idea → Understanding → Action → Local Participation → Accessible Output



Technologies to be used in the solution:

Interface:
Voice + Text Web App (Multilingual, Low-Bandwidth)
Core AI:
LLM (GenAI Engine) + AI4Bharat Speech Models
Backend:
Kiro (AI orchestration) • AWS Lambda • API Gateway • DynamoDB
Intelligence Engines:
Market Simulation • Business Plan Generator • Content Creator • Event Detector
Infrastructure:
AWS Cloud (Scalable, Secure, Cost-Efficient)



Estimated implementation cost (optional):

MVP Build Cost:
₹60K - ₹1.2L (Full working prototype)
Monthly Running Cost:
₹15K - ₹40K (Cloud + GenAI + Voice)
Scalability Efficiency:
≈ ₹3-₹7 per user / month at scale

Why this stands out

Serverless: pay only for usage
Voice + AI optimized for low bandwidth
Infrastructure scales automatically
